

Artificial Intelligence: Tools & Applications

Course Title	Artificial Intelligence: Tools & Applications
Course Length	2 days

Course Learning Outcomes	
	By the end of this course, the participants should be able to:
LO1:	By the end of the course, participants will be able to distinguish between different types of AI (Generative vs. Predictive) and explain "under-the-hood" concepts like LLMs and Hallucinations in plain business language, moving past the hype to reality.
LO2:	Participants will move from 1-sentence "Google-style" searches to professional-grade structured prompting. They will master frameworks (like R.C.E.O. - Role, Context, Execute, Output) to generate high-fidelity business documents, strategy drafts, and creative briefs.
LO3:	Participants will gain hands-on experience using AI for "Non-Designers." They will learn to prompt for high-quality graphics (Midjourney/DALL-E), produce professional video clips (Runway/Sora),
LO4:	Participants will learn to use AI as a "Thinking Partner" for innovation. They will use tools (like Uizard or Miro AI) to turn a text idea into a visual product prototype or a structured business model, drastically reducing the time between "concept" and "first draft."
LO5:	Participants will learn the "Trust but Verify" workflow. They will be able to identify hallucinations, understand the risks of data privacy in public models, and apply a 3-step verification process to ensure all AI-generated content is accurate, safe, and brand-aligned before it is shared.
LO6:	Participants will identify which parts of their specific role are "AI-vulnerable" and which are "AI-resilient." They will develop a personal "AI Roadmap" to ensure they are the ones <i>leading</i> the implementation in their industry, rather than being replaced by it.

Course Summary			
Lecture	Module Name	Key Concepts/Topics Covered	Activities/Assessments
1	Demystifying AI	What are the different kinds of AI; What is generative AI and why is it significant, LLM fundamentals; Hallucination problem	Layman's pitch Understanding current AI use
2	Art of prompting	Precision prompting; Anatomy of a prompt; what makes a good prompt; Different prompting techniques and frameworks (Zero shot, Train of thought etc)	Formatting AI responses into professional tables; identifying the best framework (quiz); before and after exercises
3	Multimodal AI	Anatomy of a visual prompt; Design consistency; Human in the loop process	Rapid brand kit; peer review session
4	Rapid prototyping with AI	Ideation prompts; overcoming the blank page syndrome; turning a napkin sketch into a plan	Sprint to prototype
5	Governance, risk and trust	The 3 step verification process; Data, privacy and leaky models; AI ethics	Pitfall hunt; drafting an AI usage policy together
6	Leading the AI transformation	Identifying when to use AI; How to become the 'augmented' leader; How to introduce AI tools to a team	Personal and professional roadmap mapping

Supplementary Material/Reading Material
These will be provided in the form of a digital resource directory post the session
